

## ***5 Paragraph Order for W-02***

**December 5, 2020**

Rain is forecasted to begin Friday 4 Dec. We are expected to have a total of 1"-3" of rain from this storm before the turnover to snow on Saturday after 12 noon. Snow is expected to last until Saturday night and projected totals are between 1"-3" before it ends. The pavement temps at writing this are around 42 degrees. The duration of the Storm will be somewhat long for the amount forecasted and is possibly lingering until midnight. The snow is also forecasted to be wet heavy and is expected to start sticking on the roadway after sundown and the rates of snow overtake the pavement temps. This storm should have a very little effect on traffic. There are **roadplates** at the following locations that plow operators need to be made aware of....

**Walnut St in Several Locations from the gas work. Feeney Bros (contractor) will have plates pinned and marked with traffic control devices and two employees will report to the street when snow starts according to Engineering**

**Same with Grove St in Several Locations from the gas work. Feeney Bros (contractor) will have plates pinned and marked with traffic control devices and two employees will report to the street when snow starts according to Engineering**

With this forecast, we are **NOT** applying Liquids today. We will wait to review forecast to schedule the **salters to report**. When we get a closer forecast with the track of this event we will try to have the salt crew report just prior to the change over from rain to snow. We have not made a determination on plowing as of yet. So plow operators, **(WITH SIGNIFICANT SUBSTITUTIONS) will not be scheduled as of yet.** All trucks should have been set up, fueled, and ready prior to leaving on Friday and with the COVID Issues, please wipe down your cab and anywhere you place your hands before you leave it today.

There are some substitutions due to COVID, and we are light staffed for this event. There will be a longer clean up period. Be sure to check in with Management staff prior to the storm. Again move your personal vehicles inside when you arrive and report that you are here.

At this time, with this forecast, we do not anticipate an overnight shift, so cots will not be set up and a food order is not expected at this time. Bring yourself a change of clothing in case you get wet, along with any medications you take within that period.

For this storm, the supervisors will be

Kevin Collins	Unit 53 (Liquids)
Tim Bania	Unit 15 (Schools and lots)
Beth Gildae	Unit 17 (Mobile Ops)
Mike Quinn	Unit 4 (Superintendent)
